

GoldSync 5.0

ADVANCED SYNCHRONISATION FOR GOLDMINE

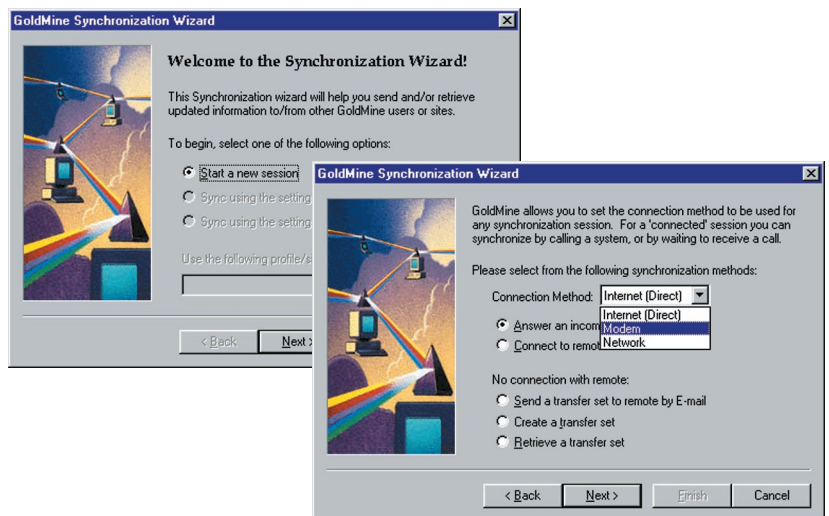

If you are a small or medium-sized business using GoldMine®, GoldSync® 5.0 makes it easy for you to share data with all your outside sales people or branch offices.

GoldSync handles the entire synchronisation process for multiple remote users and sites. It provides automated and unattended 'agent' functions to process when, what and how information is synchronised across your entire team. Whether information has been added, changed or deleted (even customisations, lookup lists and security settings), GoldSync keeps everyone up to date.

Regardless of where your team or salespeople are located, they need to access the latest information on their accounts and prospects. Being responsive means shorter sales cycles and improved service levels. With GoldSync, updating and distributing vital customer information is a reality.

GoldSync synchronises more than just leads. GoldSync can provide updated sales and marketing materials, perform territory realignments and even send GoldMine version updates.

Use the most effective and cost-efficient method for keeping your sales team informed

GOLDSYNC® 5.0

STAY UP-TO-THE-MINUTE ON EACH AND EVERY DETAIL

GoldSync® 5.0 provides a way to exchange much more than just information about prospects and customers for your business. It keeps you and your team updated on scheduled activities, special notes and 'linked' documents like quotes and proposals.

CONNECT FROM ANYWHERE, ANYTIME

Choose the connection methods that works for your business: including TI, Frame Relay, Internet email, modem pools or IP-to-IP options.

ONE-CLICK ACCESS TO INFORMATION UPDATES

Create and use unlimited synchronisation sessions (profiles) with just the click of a button. The Synchronisation Wizard is great for those times when all you need to do is send a single lead off to your salesperson. GoldSync is flexible enough that you won't ever waste time waiting for the next scheduled synchronisation cycle.

SHARE ONLY THE NECESSARY DATA

Filter the information you exchange between GoldMine® 5.0 sites (licenses) to include only data pertinent to that location or representative. Filtering also cuts down on dialing costs and eliminates territory conflicts.

SECURE THE COMPANY'S MOST VITAL ASSET

Protect your data with three levels of security including password, site and serial number requirements. Transfer sets are automatically encrypted for additional protection.

MANAGE ALL OF THE USERS OR SITES IN YOUR SMALL OR MID-SIZED BUSINESS

GoldSync's 'undocking' capability gives your company total flexibility. GoldSync allows administrators to create sublicenses from the main license for any salespeople that work both in and out of the office.

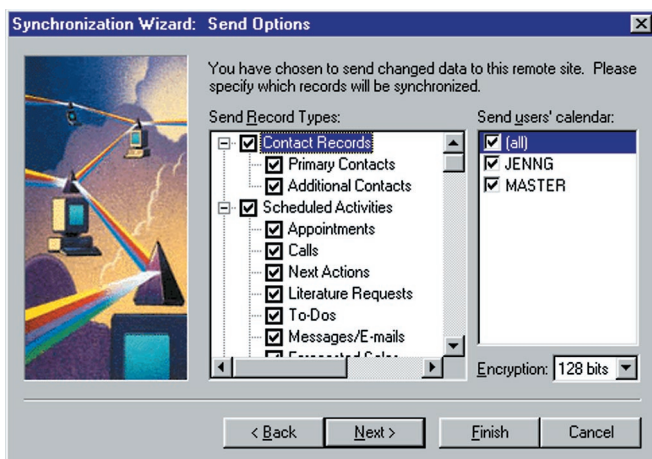

MANAGE DATA SYNCHRONISATION WITH REDUCED MAINTENANCE AND COSTS

The GoldSync Administration Centre offers a Windows Explorer look and feel, designed to help with the set-up and management of remote GoldMine users and sites.

Regardless of when salespeople last synchronised, GoldSync maintains detailed logs of each session, tracking what was sent and received. GoldSync offers worry-free updates while keeping connection charges down by sending only those records that have been added or updated since a salesperson's last transfer set.

In addition, GoldSync's Wizards use a step-by-step procedure to guide you through setting up sites (both groups and members), processes and servers.

Synchronise information that is vital to your team and the success of your business

System Requirements: Pentium 133 MHZ or higher IBM-compatible PC / 64MB RAM / 50MB free hard drive space / Microsoft® Windows 95/98/2000/NT® 4.0/DOS 3.1 File- and Record-Locking Compatible Network.
